
Plant Construction P

Plant Construction

The engineering division currently manages an annual capital expenditure of £30m associated with the development of process plants. Furthermore the capacity of the division is set to expand to accommodate the international development of process plants and future growth of RockTron.

The division is staffed by experienced design, project and construction engineers across the range of mechanical, piping, material handling, electrical and control disciplines.

Designs are developed stage by stage from process flow diagrams through to full 3D modelling of process plants. Process, support services, equipment specification and procurement is undertaken in house. Each construction site is either self managed or contractor managed as appropriate.

To enquire about the possible construction of RockTron PFA Beneficiation Plants please email our CEO on newplants@rktron.com

To enquire about contracting work with RockTron engineering please email contracting@rktron.com
